Mr. Andrew Miner
Sunnyvale Planning Division
456 W. Olive Avenue
Sunnyvale, CA 94086

Dear Andy:

Following is Cingular's Alternative Site Analysis for our proposed site at the Fairbrae Swim & Tennis Club at 696 Sheraton Drive:

The purpose of the proposed site at 696 Sheraton Drive is to provide seamless coverage and improved quality of coverage in the residential area surrounding the Fairbrae Swim & Tennis Club. Currently, this area of Sunnyvale is lacking coverage. The proposed site would provide the necessary coverage as well as provide the next generation of technologies allowing additional features and high-speed data transfer. Without this site, this area of Sunnyvale would be left with a large coverage hole which would mean not only are the newest technologies not available to this area of Sunnyvale, but there would continue to be a substantial hole in the basic voice communications in this area.

As part of our search for the location of our facility, Cingular evaluated the coverage deficit as well as the location of existing sites. In order to expand and improve coverage in the area, Cingular's Radio Frequency (RF) engineers determined we needed to locate a facility at the corner of W. Remington Drive and Hollenbeck Avenue. A facility at this location would provide coverage to the area in need, as well as have the required line-of-sight to Cingular's existing adjacent facilities. In addition, if Cingular cannot locate at this site, we would need to locate 3-4 sites surrounding this residential area in order to provide approximately 60% - 70% of the coverage that this one site can provide.

Given the parameters of our location criteria, our search area was quite limited. We were limited to a very specific two-block area. We did look at other options, however, before arriving at 696 Sheraton Drive.

Our first option was a PG&E tower at 151 El Camino Real. This existing tower, while having the advantage of being an existing vertical structure, is located too close to two of our existing sites. When sites are located too close to each other, they cause interference. In addition to the interference, they also do not expand the coverage footprint, but rather overlap the coverage. We have an existing site at El Camino Real & Hollenbeck Avenue and another site at El Camino Real & Sunnyvale-Saratoga Road. Because of the proximity to those two existing sites, a site at this PG&E tower at 151 El Camino Real would not work technologically. In addition, it would not provide coverage far enough to the south.

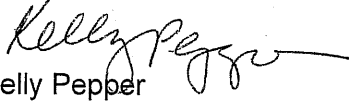

The second option was the Hollenbeck School south of the Fairbrae Swim & Tennis Club. This site is too far to the south of the area we are trying to cover. In addition, it is too close to our existing site at Fremont High School at 1279 Sunnyvale-Saratoga Road.

We chose the Fairbrae Swim & Tennis Club at 696 Sheraton Drive because it was one of the only non-residential properties in the area to which we are trying to provide service. Although

this site is one block south of the ideal location (W. Remington Drive & Hollenbeck Avenue), this location allows us to provide much needed coverage and service to the residential area without locating on residential property. It also allows us to design a site that will be visually unobtrusive.

If you have any questions, please call me at 415-307-5082. Thank you for your assistance in reviewing this proposal.

Sincerely,

Kelly Pepper
